DELO DUALBOND® AD345
UV- heatcuring adhesive

**Base**
- dual-curing modified polycarbaminacid derivative
- one-component, solvent-free, UV- heatcuring, filled

**Use**
- especially for a fast fixing of components and curing at low temperatures
- the cured product is normally used in a temperature range of -40 °C to +130 °C; depending on the application, other limits may be more reasonable
- compliant with RoHS directive 2015/863/EU
- halogen-free according to IEC 61249-2-21

**Processing**
- the adhesive is supplied ready for use; in case of cool storage, it must be ensured that the container is conditioned to room temperature before use
- the containers are conditioned at room temperature (max. 25 °C); the conditioning time is approx. 1.5 h for containers up to 30 ml; approx. 2 h for containers up to 160 ml; approx. 6 h for containers up to 600 ml; additional heat addition is not allowed
- processing time of cartridges at room temperature (max. 25 °C) 3 days
- the adhesive is normally applied by dispensing
- a variation of the flow properties is possible by a dispensing valve heating (max. temperature of +50 °C)
- the surfaces to be bonded must be dry as well as free of dust, grease and other contaminations
- when using aqueous cleaners with alkaline properties, they must be removed from the bonding surface after cleaning through appropriate rinsing cycles
- dispensing valves and product-bearing elements must be carefully cleaned before use, residues of other products must be completely removed; DELOTHEN EP as well as acetone are recommended to remove DELO DUALBOND residues
- stainless steel, PE, HDPE, PP and PTFE are suitable materials for product-bearing elements; it is not recommended to use PU and non-ferrous metals
- for further information please refer to our instructions for use DELO DUALBOND
**Curing**
- fixing by curing with UVA light in a wavelength range of 320 - 400 nm in 1 - 5 seconds. Curing by heat in a temperature range of +80 °C to +130 °C is mandatory
- the predominant part which has to be bonded should not get fixed with light, the maximum adhesion is given with an only heat cured product
- the time between fixing and heat curing should not be longer than 1 hour at room temperature (max. +25 °C)
- the adhesive features a post-curing attitude. After a heat curing step at low temperatures (< +120 °C) and a short curing time a strength is given. Furthermore the adhesive shows a post curing at room temperature and rises up to the strength after about 24 h recording to the temperature of the heat curing step
- the actual curing times at the respective temperatures are dependent on the heating time of the components, the heating time of the components must be added to the curing time of the adhesive
- the heating time depends on the component size and the oven type

**Instructions and advice**

**General**
The data and information provided are based on tests performed under laboratory conditions. Reliable information about the behavior of the product under practical conditions and its suitability for a specific purpose cannot be concluded from this. It is the customer's responsibility to test the suitability of a product for the intended purpose by considering all specific requirements and by applying standards the customer deems suitable (e.g. DIN 2304-1). Type, physical and chemical properties of the materials to be processed with the product, as well as all actual influences occurring during transport, storage, processing and use, may cause deviations in the behavior of the product compared to its behavior under laboratory conditions. All data provided are typical average values or uniquely determined parameters measured under laboratory conditions. The data and information provided are therefore no guarantee for specific product properties or the suitability of the product for a specific purpose.

Nothing contained herein shall be construed to indicate the non-existence of any relevant patents or to constitute a permission, encouragement or recommendation to practice any development covered by any patents, without permission of the owner of this patent.

All products provided by DELO are subject to DELO's General Terms of Business. Verbal ancillary agreements are deemed not to exist.

**Instructions for use**
The instructions for use of DELO DUALBOND are available on: www.DELO.de. We will be pleased to send them to you on demand.

see material safety data sheet

**Specification**
The properties in italics are part of the specification. Ranges with clear limits are defined for them and others, where applicable. In the course of the QA test, each batch is tested for these properties and the maintenance of the limits is ensured. The measuring methods used can deviate from those specified in the data sheet. Details can be found in the QA test report.
