

DELO® MONOPOX SJ2981

heat-curing adhesive, stable

Base

- epoxy resin, construction adhesive
- one-component, heat-curing, filled, thixotropic

Use

- for the bonding of all metal types, temperature-resistant plastic, ferrite and ceramic
- especially for high-strength, tough-hard bondings with very high static and dynamic loading capacity, even at increased temperatures
- the cured product is normally used in a temperature range of -55 °C to +200 °C; depending on the application, other limits may be more reasonable
- for bondings requiring a high run resistance
- compliant with RoHS directive 2015/863/EU

Processing

- the adhesive is supplied ready for use, allow the container to adjust to room temperature prior to use
- the containers are conditioned at room temperature (max. 23 °C); the conditioning time is approx. 2 h for containers up to 310 ml; additional heat addition is not allowed
- the surfaces to be bonded must be dry as well as free of dust, grease and other contaminations
- use DELOTHEN cleaners for the cleaning of bonding surfaces
- adhesion to the components can be improved by sand blasting, grinding or pickling
- when processing the adhesive with dispensing units, filler materials contained can have an abrasive effect on the systems used

Curing

- curing proceeds at temperatures between +120 °C and +180 °C
- to heat the components, increased temperatures can be used, as well
- the heating time of the components must be added to the actual curing time
- for curing, the inside of the adhesive layer must have the required temperature
- depending on the adhesive amount used, exothermic reaction heat is developed which can lead to overheating; in this case, the curing temperature must be reduced accordingly
- increased temperatures shorten the curing process, lower temperatures extend it, and can change the properties of the cured product
- fast curing by induction heating possible

Technical data

Color

cured in a layer thickness of approx. 1 mm

beige, opaque

Density [g/cm³]

DELO Standard 13
at room temperature (approx. 23 °C)

Viscosity at 23 °C, rheometer, 10 1/s	pasty
Processing time at room temperature (23°C / 50% r.h.)	4 weeks
Curing time with air convection oven [min] at +150 °C adhesive temperature	40
Compression shear strength Al/Al [MPa] DELO Standard 5 curing: 40 min at 150 °C	57
Floating roller peel resistance St/St [N/mm] DELO Standard 38 curing: 40 min at +150 °C	7
Tensile shear strength Al/Al [MPa] DIN EN 1465, sand-blasted component thickness: 1.6 mm after 40 min at +150 °C	25
Tensile strength [MPa] according to DIN EN ISO 527 layer thickness: 2 mm after 40 min at +150 °C	71
Elongation at tear [%] according to DIN EN ISO 527 layer thickness: 2 mm after 40 min at +150 °C	2
Young's modulus [MPa] according to DIN EN ISO 527 layer thickness: 2 mm after 40 min at +150 °C	5500
Shore hardness D according to DIN EN ISO 868 after 40 min at +150 °C	89
Glass transition temperature [°C] DMTA, 3 point bending curing: 40 min at +150 °C	134
Coefficient of linear expansion [ppm/K] DELO Standard 26, TMA below Tg	35
Coefficient of linear expansion [ppm/K] DELO Standard 26, TMA above Tg	153
Water absorption [weight %] according to DIN EN ISO 62 curing: 40 min at +150 °C	0.1
Storage life at 0 °C to +10 °C in unopened original container	6 months

Instructions and advice

General

The data and information provided are based on tests performed under laboratory conditions. Reliable information about the behavior of the product under practical conditions and its suitability for a specific purpose cannot be concluded from this. It is the customer's responsibility to test the suitability of a product for the intended purpose by considering all specific requirements and by applying standards the customer deems suitable (e. g. DIN 2304-1). Type, physical and chemical properties of the materials to be processed with the product, as well as all actual influences occurring during transport, storage, processing and use, may cause deviations in the behavior of the product compared to its behavior under laboratory conditions. All data provided are typical average values or uniquely determined parameters measured under laboratory conditions. The data and information provided are therefore no guarantee for specific product properties or the suitability of the product for a specific purpose.

Nothing contained herein shall be construed to indicate the non-existence of any relevant patents or to constitute a permission, encouragement or recommendation to practice any development covered by any patents, without permission of the owner of this patent.

All products provided by DELO are subject to DELO's General Terms of Business. Verbal ancillary agreements are deemed not to exist.

Instructions for use

The instructions for use of DELO MONOPOX are available on: www.DELO.de. We will be pleased to send them to you on demand.

Specification

The properties in italics are part of the specification. Ranges with clear limits are defined for them and others, where applicable. In the course of the QA test, each batch is tested for these properties and the maintenance of the limits is ensured. The measuring methods used can deviate from those specified in the data sheet. Details can be found in the QA test report.
