DELO-DUOPOX® 02 rapid
Multi-purpose 2c epoxy resin, cures at room temperature, low-viscous, unfilled

**Base**
- epoxy resin
- two-component

**Use**
- multi-purpose adhesive
- in mechanical engineering and tool construction
- in electrical engineering and electronics
- also for repair and in the do-it-yourself sector
- fast achievement of initial strength
- the cured product is normally used in a temperature range of -40 °C to +80 °C; depending on the application, other limits may be more reasonable
- compliant with RoHS directive 2015/863/EU

**Processing**
- supplied ready for use and can be processed well from the original container
- components A and B must be mixed homogeneously in the mixing ratio stated below
- using the DELO-AUTOMIX system for processing is especially advantageous
- the surfaces to be bonded must be dry as well as free of dust, grease and other contaminations
- use DELOTHEN cleaners for the cleaning of bonding surfaces

**Curing**
- at room temperature (approx. 23 °C)
- very fast reaction
- increased temperatures accelerate curing
- applying heat could change physical characteristics

**Technical data**

**Color**
- yellowish transparent

**Filler**
- unfilled

**Mixing ratio**
- \((A : B)\) according to weight
  - \(1 : 1\)
- \((A : B)\) according to volume
  - \(1 : 1\)

**Density of component A \([g/cm^3]\)**
- DELO Standard 13 at room temperature (approx. 23 °C)
  - 1.17

**Density of component B \([g/cm^3]\)**
- DELO Standard 13 at room temperature (approx. 23 °C)
  - 1.14
Viscosity of component A [mPas]
at 23 °C, rheometer (Paar)
shear rate 2/s

Viscosity of component B [mPas]
at 23 °C, rheometer (Paar)
shear rate 2/s

Processing time in 3 g preparation [min]
at room temperature (approx. 23 °C)

Maximum reaction temperature [°C]
in 20 g preparation

Curing time until initial strength [min]
tensile shear strength 1 - 2 MPa
at room temperature (approx. 23 °C)

Curing time until functional strength [h]
tensile shear strength > 10 MPa
at room temperature (approx. 23 °C)

Curing time until functional strength [min]
tensile shear strength > 10 MPa, at +80 °C

Curing time until final strength [h]
at room temperature (approx. 23 °C)

Curing time until final strength [h]
at +60 °C

Curing time until final strength [min]
at +80 °C

Tensile shear strength Al/Al [MPa]
by the criteria of DIN EN 1465, sand-blasted
component thickness 1.6 mm, gap 0.1 mm
curing: 72 h at room temperature (approx. 23 °C)

Tensile shear strength Al/Al [MPa]
DELO Standard 39, sand-blasted
component thickness: 6 mm
after 72 h at room temperature (approx. 23 °C)

Tensile shear strength
by the criteria of DIN EN 1465
curing: 72 h at room temperature (approx. 23 °C)
Compression shear strength
DELO Standard 5
curing: 7 d at room temperature (approx. 23 °C)

![Graph showing compression/shear strength]

Floating roller peel resistance St/St [N/mm] 2.5
DELO Standard 38, St/St sand-blasted
component thickness: 1.6 mm and 0.5 mm

Temperature stability Al/Al at +100 °C [MPa] 1
according to DIN EN 1465, at +100 °C, sand-blasted
component thickness: 1.6 mm

Tensile strength [MPa] 24
according to DIN EN ISO 527

Elongation at tear [%] 20
according to DIN EN ISO 527

Young's modulus [MPa] 1000
according to DIN EN ISO 527

Shore hardness D 74
according to DIN EN ISO 868

Ball indentation hardness [MPa] 53
ISO 2039, part 1

Glass transition temperature [°C] 31
TMA, 2nd heating process

Decomposition temperature [°C] 280
DELO Standard 36

Coefficient of linear expansion [ppm/K] 211
TMA, in a temperature range of +30 to +140 °C

Shrinkage [vol. %] 4
DELO Standard 13

Water absorption [weight %] 0.7
according to DIN EN ISO 62, 24 h at room temperature (approx. 23 °C)

Specific volume resistance [Ωcm] >1xE12
VDE 0303, part 30

Surface resistance [Ω] 1xE11
VDE 0303, part 30

Dielectric strength [kV/mm] 17
VDE 0303, part 2

Dielectric constant 3.2
VDE 0303, part 4
Creep resistance CTI  
VDE 0303, part 11, DIN EN 60112

Storage life at room temperature (approx. 23 °C) 600 M
in unopened original container (volume per component < 1l) 12 months

Performance under temperature influence

tensile shear strength Al/Al sand-blasted after temperature storage based on initial value at room temperature measured at room temperature (approx. 23 °C) according to DIN EN 1465
tensile shear strength Al/Al sand-blasted at temperature based on initial value at room temperature measured at determined temperature according to DIN EN 1465

Instructions and advice

General
The data and information provided are based on tests performed under laboratory conditions. Reliable information about the behavior of the product under practical conditions and its suitability for a specific purpose cannot be concluded from this. It is the customer's responsibility to test the suitability of a product for the intended purpose by considering all specific requirements and by applying standards the customer deems suitable (e.g. DIN 2304-1). Type, physical and chemical properties of the materials to be processed with the product, as well as all actual influences occurring during transport, storage, processing and use, may cause deviations in the behavior of the product compared to its behavior under laboratory conditions. All data provided are typical average values or uniquely determined parameters measured under laboratory conditions. The data and information provided are therefore no guarantee for specific product properties or the suitability of the product for a specific purpose.

Nothing contained herein shall be construed to indicate the non-existence of any relevant patents or to constitute a permission, encouragement or recommendation to practice any development covered by any patents, without permission of the owner of this patent.

All products provided by DELO are subject to DELO's General Terms of Business. Verbal ancillary agreements are deemed not to exist.

Instructions for use
The instructions for use of DELO-DUOPOX are available on: www.DELO.de. We will be pleased to send them to you on demand.

Occupational health and safety

Specification
The properties in italics are part of the specification. Ranges with clear limits are defined for them and others, where applicable. In the course of the QA test, each batch is tested for these properties and the maintenance of the limits is ensured. The measuring methods used can deviate from those specified in the data sheet. Details can be found in the QA test report.
