#### DELOLUXcontrol

The measuring device can be used to detect changes in light intensity that may be caused by aging, contamination, impurities or changes in distance of the lamp heads. It can be equipped and operated with different detector heads.

The EEPROM technology used makes an additional, regular calibration of the display units with the sensor heads unnecessary. This allows detector heads and display units to be changed or expanded quickly and easily.

## Highest quality

All DELO devices are "made in Windach". To ensure maximum quality of our products, we bundle development, production, technical testing and support (e.g. also process simulations) at our headquarters. However, our sales engineers will also support you wherever you are – worldwide from our subsidiaries or one of our representative offices.

# Plug and play

The DELOLUX lamps and matching base units can be integrated into production lines via plug & play. Immediately after connecting, the base unit automatically releases all important information about the plugged-in light source, without the need for manual configuration in advance. Within a few minutes, the devices are ready for use.
